

## Setup Netcam for Remote View:

**Step 1:** Install App for viewing your “CAMoIP” device in iPhone App Store. (See *Fig. A* below.)

Go To App Store

Once you go to the App Store, and click on “SEARCH” You will then need to search a new app.

Click to install

Type in the name of the app “acro netcam”

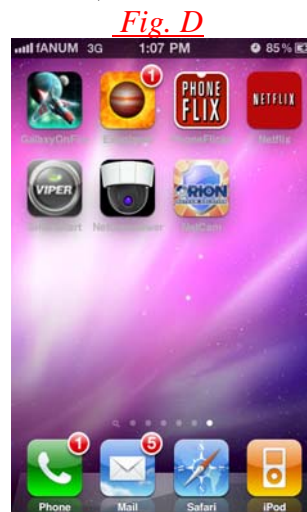

**Instruction on how to Search:** (See *Fig. B* above)

- In the “Search” field type: “acro netcam”
- It will display one object.
- Install the app by clicking on “free” then “Install” onto your phone.
- Once installed you will see an icon on your phone. (See *Fig. D* below)

Once installed it will show up as “Orion”

“Click on install”

Run the app on your device.

## Setup Netcam for Remote View:

### Step 2. Add your camera.

Once you run the app you will need to add a camera. To add a camera click on the "+" button..

Create a Name for you new addition.

Insert in all the info for your device account. Name, IP, Port number, user name & pws.

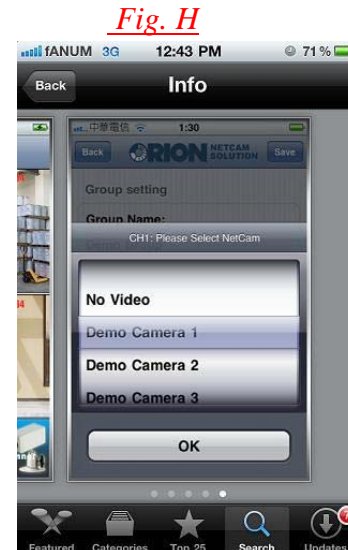

### Instruction on how to add groups: (See Fig. G below)

- e. In the "bottom" field select: **"camera group"**
- f. It will display group accounts. **Fig. G**
- g. To add NEW group, hit the + and add cameras which have been added already. (See Fig. G )
- h. You will give your groups names and you can have cameras added to group in multiples of 4.

Click on the "+" button near the top.

Then you can add camera which you have added (See Fig. H)

You can add up to "4" cameras per group.
