

Backup

- Click on Backup icon to enter menu
- Choose start and end time
- Click Channel to choose which cameras to include.
- Choose save to device
- Click on calculate and if space required is lower than space available than start button will illuminate

Remotely you can choose to save to the remote PC or you can choose to save to devices attached to the DVR. That means that you can save video to the Optical Drive of an 8 or 16 channel unit even if you are in another state. Only onsite user intervention required is the insertion of a blank disk or the insertion of a USB memory drive.
